

Annexe D1.5.4 – Integrated business model

www.nereus-project.eu > tab 'tools' > Financial feasibility Tool

Financial Feasibility Tool - business model

With the inputs of the demo sites we developed a tool to give a first, high-level assessment of how financially feasible a case is. With this model we aim to make resource recovery and reuse more accessible, and to boost sustainable innovation.

With this tool the user can assess whether

- The business case is feasible,
- What drives the business case,
- What needs to be optimized to achieve a profitable outcome.

In this tutorial we'll walk you through the feasibility model and teach you how to use it!
