

05 – Pilot – participative adaptation solutions in commercial city centre

I. Cross-border pilot action to design and implement a package of sustainable drainage systems (SUDS) measures in residential developments and businesses and public space in town centre (upstream, rainwater catchment area) to reduce risk in the flood-prone seaside area (Critical Drainage Area)

Location: Southend on Sea - town centre

Southend-on-Sea Borough Council created an environmentally friendly and visually appealing area in Southend that improves drainage, reduce the potential impact of climate change and acts as a vibrant community space.
