DOC challenge Aquatech Amsterdam 2017

Date: 1 November

Time: 13.30 – 16.00 hrs

Venue: Aquatech Amsterdam

An opportunity for SME's to test your product

Come to Aquatech and make your pitch to showcase your DOC (Dissolved Organic Carbon) removal related innovative product. We are looking for SME's that have developed innovative products that will help to reach a more efficient DOC removal from drinking water supplies, which is a growing problem globally. After the pitches, selected SME's will get the opportunity to test their DOC removal related products at water treatment testing facilities in the 2 Seas region. We are looking for any innovations related to DOC, such as water quality analyzers for DOC, UVT, DBP's and streaming current, as well as technologies for DOC removal, etc.

About the project

In 2015, the DOC2C's project, an Interreg 2 Seas project of 4 years started. The main objective of this project is to significantly improve and accelerate innovation in drinking water treatment with the focus on DOC-removal by collaboration within the 2 Seas region (the Channel and North Sea). The DOC2C's consortium, consists of PWNT (NL), South West Water (UK), De Watergroep (BE), Lille University (FR) and Delft University of Technology (NL). The programme is part-financed by the European Regional Development Fund (ERDF) and has a total of € 241 m ERDF, to co-finance projects during this period.

Interested?

Please send an email (200 words maximum) describing your product and attach a product brochure or website to info@doc2cs.com before 15 October. A jury of international water professionals will select the best pitches for the DOC challenge.
