# DERMA – Design of Enabling-Regenerative Materials for Ageing

Developing technologies  
for a better health

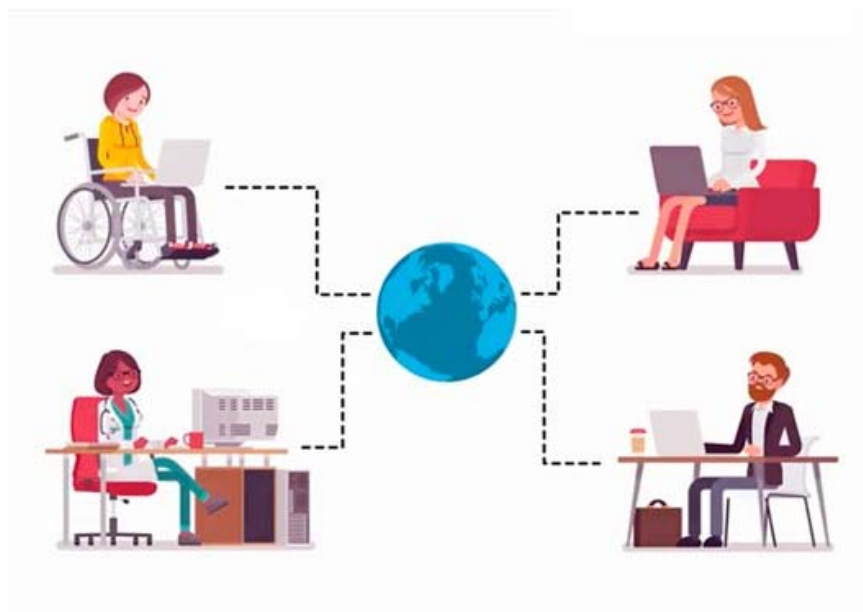

# DERMA – 01/09/2016 – 30/11/2019

The objective of DERMA is to develop new interventions for the management and treatment of dermal ulcers and related skin conditions, including stomas. By addressing market and patient needs, the project will deliver advanced new technologies (incorporating marine sourced biopolymers) ready for exploitation by industry to manufacture improved products for the treatment of patients.

Developing technologies

# EDUCAT – Empowerment of Disabled people through the User Co-creation of Assistive Technology

Developing technologies  
for a better health

**Interreg**   
2 Seas Mers Zeeën  
European Regional Development Fund

# EDUCAT – 01/09/2016 – 31/08/2020

The project objective is to develop and deliver new Assistive Technologies (ATs) developed intended to be open, modular and able to adapt their assistance to the user's needs and give feedback to users in response to their needs.

Developing technologies  
for a better health

# CoBra – Towards Adaptive Cooperative Brachytherapy for the Prostate

Developing technologies  
for a better health

# CoBra – 01/01/2018 – 30/09/2022

The CoBra project aims to improve the quality of both diagnosis and treatment of localised cancers, by developing innovative technology for biopsy and brachytherapy under MRI control.
